

POD Audit observations

Reporting period: Weeks 35–38, 2026 (2026-08-29 to 2026-09-19)

Scope: 342 audits across 335 stores, 48 cities (PAN India). Data drawn from the Executive Summary, FNV, NOICE and DBEM tabs of the POD Audit Dashboard.

1. Audit Coverage

Metric	Value
Audits conducted	342
Stores audited	335
Cities covered	48

Note: Basis for every percentage figure in this document.

2. Categorywise Compliance Score

Category	Avg. compliance score
FNV	65.1%
NOICE	78.3%
DBEM	80.5%

Note: FNV trails both other categories by 13-15 points - the weakest-performing category overall.

3. Headline Non-Compliance

Parameter	Non-compliant stores	Store base	% non-compliant
Inward temp record	264	335	78.8%
FNV Damage removal	146	335	43.6%
Freezer temp	161	333	48.3%
Chiller temp	139	335	41.5%
AC room temp	88	335	26.3%
Expiry removal (NOICE/DBEM)	8	335	2.4%

Note: Freezer temp applies only to NOICE (no Freezer zone in FNV/DBEM), so its % is against NOICE's own store base. Inward temp record is the single biggest flag on the dashboard.

4. Category-wise Parameter Compliance — FNV

Parameter	Fully compliant	Partial	Non-compliant	Non-compliant %
Inward Temp record	69	21	244	73.1%
FNV Damage removal	178	6	146	44.2%
QC-Record	149	39	142	43.0%
Chiller-Temp	191	18	125	37.4%
Zone-end check	11	0	4	26.7%
AC room temperature	239	11	84	25.1%
Stacking	242	35	58	17.3%
Put Away	269	6	43	13.5%
Storage Location Adherence	200	112	6	1.9%
FIFO/FEFO-Stacking	209	119	3	0.9%

Note: FNV's biggest gaps are temperature discipline (Inward/Chiller) and produce damage removal - process-adherence items (FIFO, storage location) are strong.

5. Category-wise Parameter Compliance — NOICE

Parameter	Fully compliant	Partial	Non-compliant	Non-compliant %
Inward Temp record	43	77	214	64.1%
Freezer-Temp	152	20	161	48.3%
Chiller-Temp	186	23	125	37.4%
AC room temperature	239	10	84	25.2%
Put Away	269	6	43	13.5%
Expiry-Removal	181	113	6	2.0%
FIFO/FEFO-Stacking	151	141	3	1.0%
Storage Location Adherence	190	115	0	0.0%
Puffed packs-Removal	303	19	0	0.0%
Zone-end check	14	1	0	0.0%

Note: Cold-chain temperature checks (Inward/Freezer/Chiller/AC) dominate NOICE's failures; expiry and packaging integrity are well controlled.

6. Category-wise Parameter Compliance — DBEM

Parameter	Fully compliant	Partial	Non-compliant	Non-compliant %
Inward Temp record	43	80	211	63.2%
Put Away	269	6	43	13.5%
Expiry-Removal	249	84	2	0.6%
FIFO/FEFO-Stacking	233	91	2	0.6%
Puffed packs-Removal	295	27	0	0.0%
Zone-end check	15	0	0	0.0%

Note: DBEM is the strongest category overall - Inward temp record is its only material weakness.

7. Top Concern Parameters (cross-category ranking)

Rank	Category	Parameter	Non-compliant %
1	FNV	Inward Temp record	73.1%
2	NOICE	Inward Temp record	64.1%
3	DBEM	Inward Temp record	63.2%
4	NOICE	Freezer-Temp	48.3%
5	FNV	FNV Damage removal	44.2%
6	FNV	QC-Record	43.0%
7	FNV	Chiller-Temp	37.4%
8	NOICE	Chiller-Temp	37.4%

Note: Inward Temp record is a systemic, cross-category failure (not one brand's problem) - top priority for corrective action.

8. Key Observations

- Inward temp record is the dominant failure across all three categories - likely a process/training gap at goods-receipt, not category-specific.
- FNV is the weakest overall category, driven by temperature checks and damage removal, not process-adherence.
- DBEM is the strongest category, with only Inward temp record as a real gap.
- Expiry/FIFO/storage-location controls are consistently strong across all categories - not a concern area.
